

Equifem

COMPOSITION

Each tablet contains:

Drospirenone 2.00 mg. + Estradiol (as Hemihydrate) 1.00 mg.

DRUG ACTION

EQUIFEM is an estrogen-gestagen combination for Hormone Replacement Therapy (HRT). Hormone replacement treatment with EQUIFEM provides an effective relief of the menopause-related symptoms and protects women from osteoporosis.

DOSAGE

Take one tablet on a daily basis without interruptions.

Tablets should be taken at about the same time to keep the hormone blood levels constant.

PRESENTATION

Each package contains 28 tablets.
